

Sebastián Susnik

PRODUCT ENGINEER · FULL-STACK & AI

Buenos Aires, Argentina · sebasusnik@gmail.com · susnik.dev · github.com/sebasusnik · in/sebasusnik

ABOUT

Product engineer focused on building products end-to-end, from cloud architecture to final UX. I work primarily with **TypeScript**, **Go** and **AWS**, with growing focus on integrating LLMs and agentic workflows into production systems. I care about shipping fast without breaking things, and making technical decisions based on product impact rather than what is fashionable.

Currently building an internal creative production platform at Winclap, with a resize module being externalized as B2B SaaS.

EXPERIENCE

Product Engineer · Winclap Jul 2024 – Present

Creative Production Platform — internal platform, resize module being externalized as B2B SaaS
Designed and implemented the resize module architecture on Aurora Serverless v2 + Kysely + SST v3, with a tRPC BFF on Lambda and async processing via SQS. Owned data modeling, API contracts and service boundaries.

Creative Pulse — AI-powered cultural intelligence pipeline
Built end-to-end an event-driven pipeline that scrapes Reddit, analyzes content with Claude Haiku via Amazon Bedrock, and persists insights into DynamoDB. Architecture: EventBridge → Lambda → S3 → SQS → Analyzer Lambda. Implemented in Go with SST v3.

Internal Admin Tooling
Developed internal tools with Next.js and shadcn/ui for operations teams, prioritizing fast iteration based on real user feedback. Evaluated visualization libraries (Nivo, TanStack Table) against actual team needs.

Go · TypeScript · AWS (Lambda, Aurora, DynamoDB, SQS, EventBridge, Bedrock, S3) · SST v3 · tRPC · Next.js · React

Cloud Engineer · Sinapsis Feb 2022 – Jul 2024

Self-Realization Fellowship — global annual event platform, California
Worked on the backend and cloud architecture of the platform serving SRF's annual global convocation, with tens of thousands of online attendees distributed worldwide. Designed APIs and serverless services on AWS prioritizing scalability under concentrated traffic peaks, and resilience during critical event windows where downtime was not an option.

AWS (Lambda, API Gateway, CloudFront, S3) · Node.js · TypeScript · Serverless Framework

SKILLS

LANGUAGES	TypeScript, Go, JavaScript
FRONTEND	React, React Native, Next.js, Tailwind, shadcn/ui, Vite
BACKEND & CLOUD	Node.js, AWS (Lambda, Aurora, DynamoDB, SQS, EventBridge, S3, API Gateway, Bedrock, CloudFront), SST v3, Serverless Framework, tRPC, REST
DATA	PostgreSQL, Aurora Serverless v2, DynamoDB, Kysely
AI / LLMS	Amazon Bedrock, Claude (Haiku / Sonnet), prompt engineering, agentic pipelines, Claude Code
TOOLS	Git, GitHub, CI/CD, Docker

EDUCATION

Full Stack JavaScript · Digital House Aug 2021 – Feb 2022

Electronics Technician · ET N°28 “República Francesa” 2007 – 2012

Languages: Spanish (native), English (upper-intermediate)
